Development of a Closed Loop FMCW Radar Device to Extract Biometric Data for Security and Irregularity Detection

Dr. Qiuye He / Areesh Sobhani

6/9/25

Targeted Problem Statement / Hypothesis

Problem:

Decreasing processing time in biometric extraction from raw radar data while keeping signal integrity and security over wireless transmission

Hypothesis:

Implementing alternative transform methods can help to decrease processing times and ease data transmission and compression

Q1 - How can alternative transform methods be tested against each other and implemented to increase computation speed and accuracy?

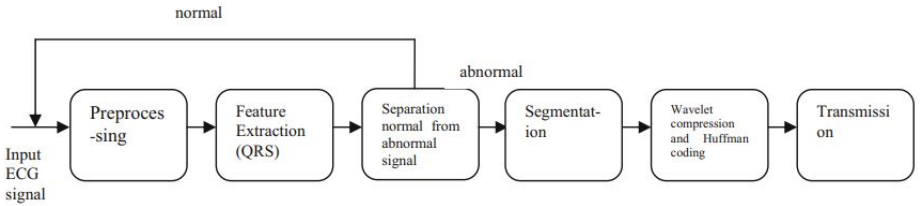
Time Frequency Analysis of Wavelet and Fourier Transform - Jarlton Wirsing (2020)

- Fourier Transform and its derivations are limited by lack of account for local features and frequency variation
- Wavelet Transform scales in time and frequency inversely
    - Many biometric signals (Heart Rate, Respiratory Function, etc.) are inconsistent in pulse rate and frequency
    - Available MATLAB implementation allows for easy testing

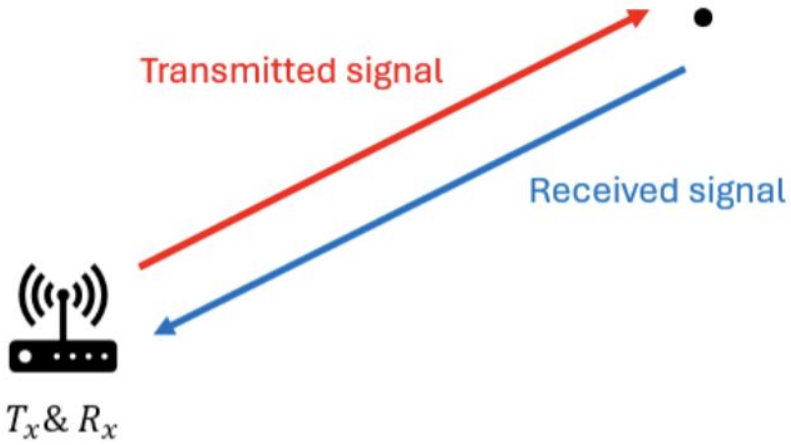
Q2 - How can radar-extracted biometric data be compressed and encrypted for secure transfer and storage?

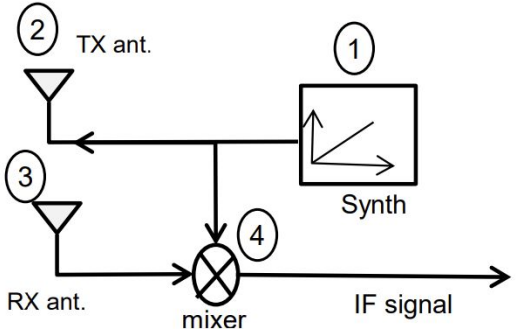
Compression and Encryption of ECG Signal Using Wavelt and Chaotically Huffman Code in Telemedicine Application

- Huffman encoding is a data compression technique done by creating binary trees based on symbol frequency
  - Higher frequency -> shorter code
- Considers huffman data compression of wavelet transformed-ECG data
  - Useful reference considering the use of wavelet transform and data transmission on health-rate data specifically



High-Level Proposed Approach / Experimental Design (Simulation)





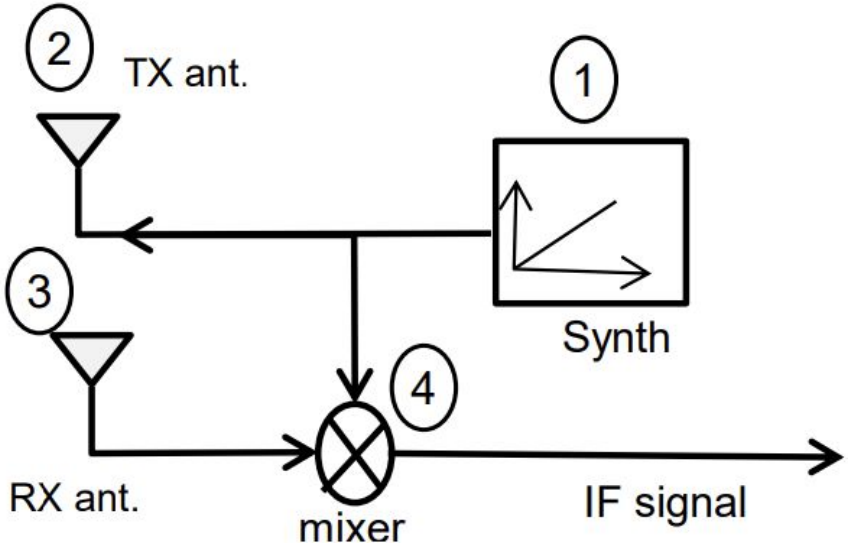
TX Chirp

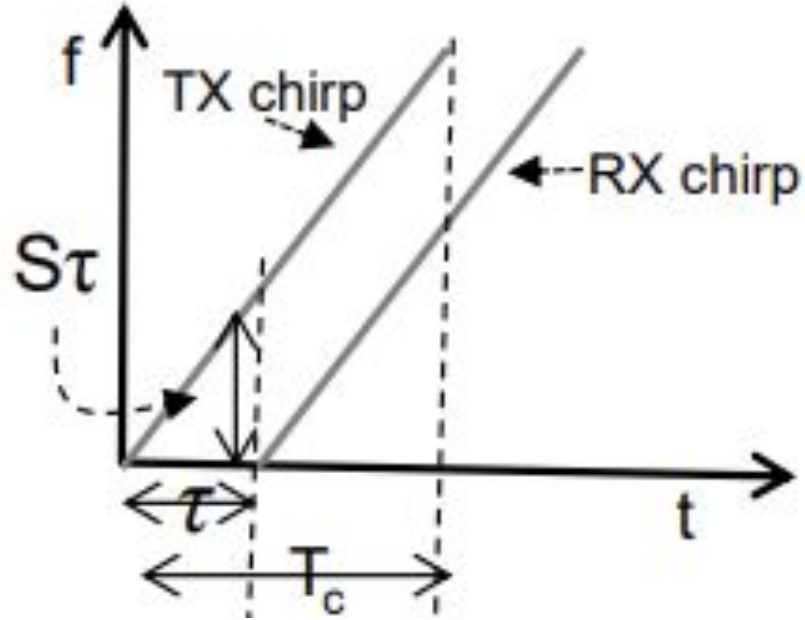
$$S_{tx}(t) = \exp\left[j2\pi\left(f_c t + \frac{1}{2}\mu t^2\right)\right]$$

RX Chirp

$$S_{rx}(t) = \alpha \cdot \exp\left[j2\pi\left((f_c - f_d)(t-\tau) + \frac{1}{2}\mu(t-\tau)^2\right) + \omega_x\right]$$

Related Work / Background - Source 1





Future Experimental Design

- Base signal decomposition algorithm
- Optimization of computation speed and accuracy
  - Test Fourier vs. Wavelet Transform
  - Potential use of Quantum Fast Fourier Transform (QFFT)?
- Testing on best encryption/transmission/storage methods to ensure security and persistence of necessary features
